

UCLA RESEARCH STUDY FOR CHILDREN WITH AUTISM

This 7-month study examines the effects of risperidone on repetitive behaviors

Children are eligible to participate if they

- ◆ Are between 8 - 16
- ◆ Have symptoms of an autism spectrum disorder (ASD)
- ◆ Have high levels of repetitive behaviors

Participants will receive

- ◆ Risperidone or placebo (inactive medication)
- ◆ Questionnaires, interviews, psychological and laboratory testing
- ◆ MRI (brain scan)
